cubesys

IT Services built on experience

Backup & Recovery taken care of – while you focus on your business

Quick Start Solution Series

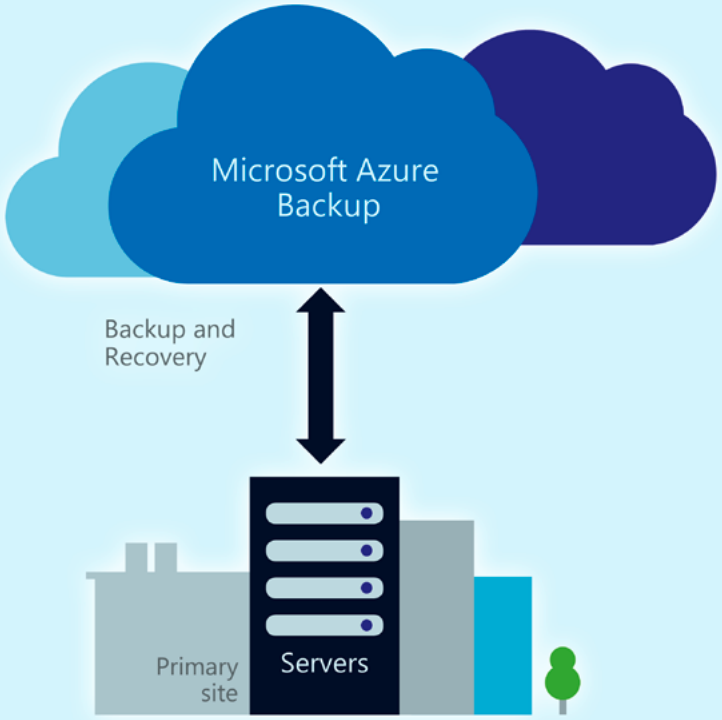
Backup as a Service

- Are you backing up all your data?
- How much is your tape solution costing you?
- Is your backup solution still resource and capital intensive?
- When was the last time you performed a restore test?

Backing up and recovering data is a necessary discipline in all organisations but often its costly, cumbersome and difficult to manage. At cubesys, we remove the day-to-day challenge of this responsibility, providing you a secure reliable and cost effective managed service.

We understand how important it is to know that you'll be able to get data back quickly and securely should a failure or emergency occur. That is why, as your BaaS provider, we will conduct regular reporting and testing to ensure that your systems and data are being backed up, are secured appropriately and available for restore when you need it.

cubesys



cubesys Backup as a Service (BaaS), built on Microsoft Azure Cloud technologies, provides a comprehensive, flexible and cost-effective backup and recovery solution.

Our service enables you to:

- Tackle spiralling storage infrastructure costs
- Get rid of your tape
- Secure your data offsite
- Provide up to 99 years of retention; meets or exceeds even the most demanding regulatory and business requirements
- Pay for what you use, monthly

cubesys Quick Start Offer

From just $3,950
Contact us today!

cubesys's consultants will meet with your team to understand your business drivers and IT landscape. Combining the understanding of your business with analysis of your current IT environment will allow cubesys consultants to build you a custom design and implementation plan. Once approved the solution will be implemented and results presented along with suggested next steps. Below is our program breakdown:

Phase 1	Phase 2	Phase 3	Phase 4
Understand your business drivers and objectives. Discover your workloads and applications	Complete a technical design. Build an implementation plan	Activate resources and build solution. Demonstrate capabilities and alignment to business objectives.	Review results and record feedback. Plan the next steps.
